

Your one-stop **ISP engineering** and **installation partner**

Network Connex is your go-to integrator for layers 1-3 of the OSI Model. From Layer 1 (the physical layer) through Layers 2 (the data link layer) and 3 (the network layer), our team can handle it all. We handle last mile OSP with light construction, plus everything inside the plant. Our teams stand out by using far more efficient methods of critical task completion for a more consistent and predictable deployment.

With design, installation, and integration services for wireless, network service providers, data center, and cable MSO customers, we specialize in national rollout projects in central office, headend, fiber hut, and data center environments.

Our services include:

- Engineering & design
- Network configuration
- Installation audits
- Infrastructure
- Structured Cabling
- AC/DC Power
- Video reception platform configuration
- Grounding & bonding
- Commissioning including software implementation
- Acceptance testing
- Material logistics
