

## Building the World's Data Backbone

On their journey to network transformation, data center and network operators face many design and deployment challenges. As your strategic partner in data center and digital infrastructure services, Network Connex has a proven history of building the world's data backbone by accelerating the performance of:

- AI factories, hyperscalers & data centers
- Fiber network providers
- Wireless network operators
- Fortune 500 enterprises
- Municipalities & government agencies
- Public utilities

### Focused Expertise for End-to-End Results

A full range of professionals with specialized expertise adds up to a competitive edge for customers. Professional Services and Deployment Services teams, plus our wholly-owned subsidiary National Technologies (NTI), harness regional strengths, operational synergies, and a nationwide footprint to self-perform best-in-class data and telecom infrastructure services in every phase of project execution.

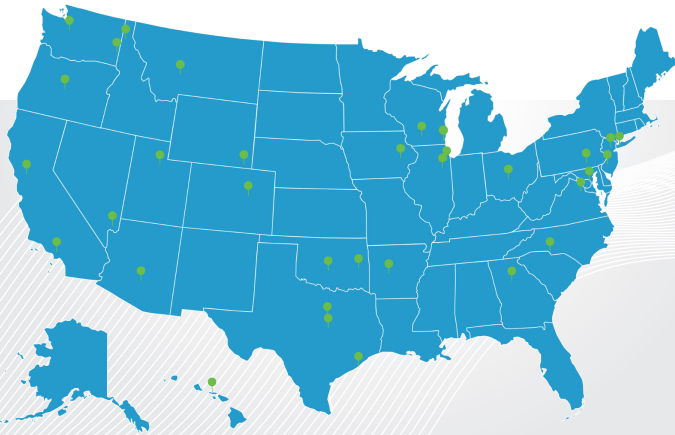

### Integrated Infrastructure Solutions

Network Connex has honed data center, fiber optics, and wireless expertise over more than two decades, for a unique understanding of communication systems interconnectivity. We help customers meet their goals and position for the future with a complete, integrated set of infrastructure services:

- State-of-the-art design & engineering
- Data center infrastructure fit-out
- End to end data center fiber solutions (OSP & ISP)
- Fiber placement, splicing, & testing
- OSP construction and specialty boring
- Wireless deployment for in-building and outdoor sites
- Integration for Layers 0-3
- Construction management & maintenance
- Complex project & program management

## Safety, the Main Fiber of our Network

Our number one priority is safe work, enforced by a dedicated Safety Team that is relentless about eliminating risks to our employees and customers. With tailored training and improvement programs, and an EMR that stays low year after year, Network Connex delivers peace of mind on every project.

## Quality Without Compromise

Network Connex's experienced team includes long-tenured professional engineers, technicians, and program managers skilled in supporting the entire project lifecycle—from plan, design, land, and permitting, through construction, deployment, closeout, and maintenance.

They perform the most technically demanding work to the highest standards of workmanship, while maintaining project budgets and schedules. Our zero-defect philosophy means work done right the first time, every time.

## Unmatched Market Presence

We were born in 2009, the same year that cloud computing moved from concept to reality. Since then, we have grown to meet digital communications customers where they are, now employing more than 1,400 experts in 30+ locations to build network infrastructure across the U.S.

## Infrastructure Services

### Engineering & Professional Services

- A&E
- OSP fiber engineering
- HLD/LLD
- BIM coordination
- Permitting
- Site acquisition & real estate
- Inspection
- Construction management
- Project & program management

### Wireless

- Macro sites, small cells, in-building solutions & temp sites
- Construction/deployment – Indoor & Outdoor
- Site hardening & maintenance

### Data Center

- OSP fiber construction
- Backbone & campus ties
- White space fit out & retrofits
- Overhead conveyance
- HAC/CAC
- Core infrastructure
- Fiber & copper structured cabling
- AC/DC power
- Network configuration

### OSP/ISP Fiber

- Underground & aerial solutions
- Placement, splicing, testing
- Proofing & blowing
- Conduit, duct banks, subducting
- Manhole/handhole placement
- Excavating, boring, drilling
- Emergency restoration
