

Network build capacity with turnkey wireless construction services

Rapidly growing data traffic demands that wireless networks maximize their capacity and increase network speed. Network Connex delivers with premier, in-house technical teams who self-perform all aspects of wireless construction to get networks online and ensure long-lasting reliability.

Preparation—For each site, the team performs site clearing, grading, and access road construction to prepare for building.

Deployment— Field experts construct building and tower foundations, stack towers, or build/set shelters. From there they install equipment and coordinate power and telco connections to bring the site onto critical networks.

Close out and maintenance—Projects wrap up with final equipment placement and commissioning, testing, and completion of detailed close-out packages necessary for hand off.

Gain a Sustainable Competitive Advantage

The Network Connex difference is expertise across wireless and fiber disciplines to design and build any component of the network at any stage of the lifecycle. When you need a construction partner to bring a wireless network to life, we deliver comprehensive, nationwide service from teams located throughout the U.S.

Construction expertise

- Site clearing & leveling
- Site grading & drainage
- Access road construction
- Building & tower foundations
- Tower assembly & stacking
- Utility & power coordination
- Grounding & power work
- Equipment & generator installation
- Tower lighting installation & commissioning
- Close out review & documentation
- Site repair & maintenance

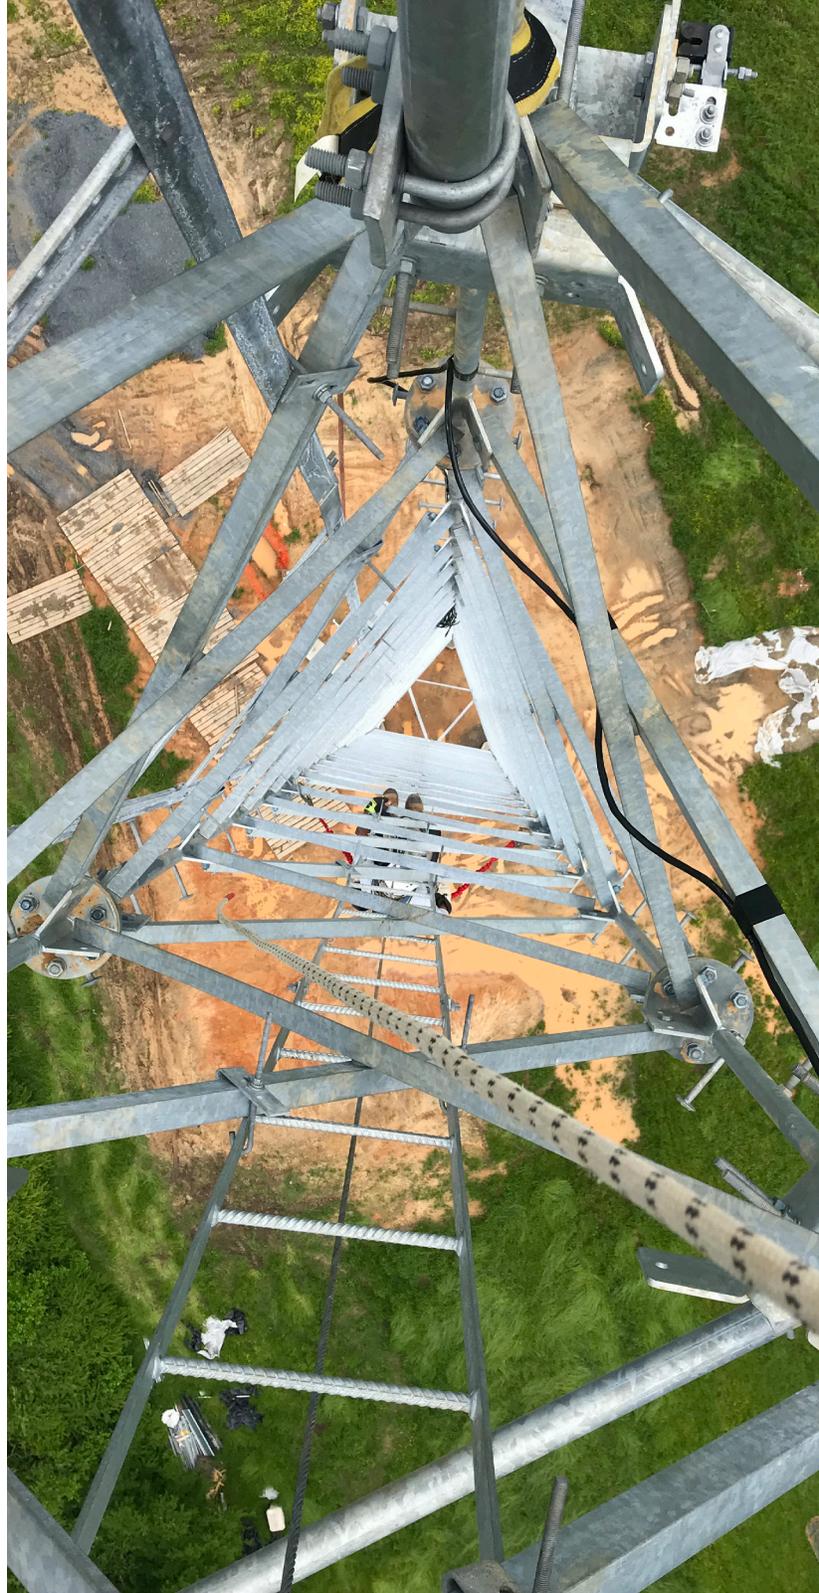

Our customers

- Wireless carriers & MNOs
- REITs
- Build to suite/tower companies
- Fiber network operators
- Broadband providers
- Neutral host operators

Site & project planning services

For support with pre-construction planning phases, our Professional Services division offers:

- Site acquisition & real estate
- Architecture & engineering
- ROW permitting
- Civil, structural, electrical drawings & analysis
- Surveying & site audits
- AAV/diverse fiber route design
- Utility coordination
- Project management
- Construction management
